More SuperCPU Notes

By Jeff Jones. The SuperCPU has been plugged into many LOADSTAR computers in the past months. It's sort of anticlimactic to report that there is little to report. The cartridge makes everything run faster. Works like a breeze. I know that I hate to give CMD non-reports when they're actively looking for bugs to squash, but under normal use, the accelerator

seems rock solid.

Our version of the accelerator won't work with GEOS yet, but I've read in newsletters that others have had the time to patch it using the information supplied by CMD, and that GEOS screams. They reported spell-checking a document in 11 seconds. Doing anything in GEOS in 11 seconds is revolutionary.

I've long hated the way TWS and SpeedScript scroll and show you every word they change when you use a search and replace. Know what I mean? You want to change every instance of

[quote][period] to [period] quote]. Well SpeedScript and TWS will show to every instance of a change before it makes it. So a process that might take two seconds might take 30 seconds on a large file because it must scroll all the way through it. Well, today I watched TWS fly through changes in a large text file that would have normally taken a while to process. Now, even with the scroll, The changes in a 30K file take an instant. the screen races by in a blur.

The only real trouble we had was with a 128D that had a hard time reading its RETURN key with the accelerator enabled. We called CMD and it's fixed

(Continued on page 3)

JBEE Is Out, CMD Is In at GEnie

Rumors abound as to the cause, but John Brown, owner of Parsec, is no longer sysop of GEnie's Commodore Roundtable. Whether he was ousted by Genie management or left of his own accord is also murky.

A source close to LOADSTAR reported that John Brown has looked into starting his own Internet service, which may have lead to a conflict of interest.

CMD was invited to take over, and will take the floundering GEnie up on their offer. LOADSTAR has been invited to resume its presence at GEnie and will do so as soon as all the paperwork is done.

As has been reported, Jeff Jones has been barred for years from the GEnie Commodore roundtable by JBEE, after a not-so-simple misunderstanding.

As PC users continue flee GEnie for pure Internet services after GEnie raised its rates, perhaps GEnie will cater more to C-64 types who remain. CMD seems to be single-handedly revitalizing the Commodore Community. Let's wish them luck on GEnie.

Anatomy Of An Internet Site

by Rick Nash, C-64 programmer and ML teacher extraordinaire. Jeff's foreword: Rick first came to LOADSTAR in 1988 with X-ref, a BASIC cross-referencing utility. Since then he's written a long list of programs, languages,

debuggers, articles and is most remembered for his ML tutorial series, ML 101 through ML 401, published on LOADSTAR, and in the Compleat programmer. Rick has been programming 6510 code, both for the C-64 and for wheelchair controller apparatus

Copyright 1996 by J & F Publishing, Inc. LOADSTART is a monthly "magazine on disk" for the Commodore 64/128. Subscribers receive two 1541 disks for one 1581 disk) in fheir mailbox every month filled with news, articles and programs. These are non-PD, high quelify programs. Subscription prices are \$69.95 for a 12-month subscription or \$19.95 for a 3-month subscription. You may also elect to subscribe. The Honorth white we charge your credit dard \$7.95 for each issue after it's shipped. The LOADSTAR Letter is published mointly by 18 F Publishing as a companion to UOADSTAR and LOADSTAR and LOADSTAR LETTER contacts. Jeff@LOADSTAR LETTER contacts.

CONTENTS OF THIS ISSUE... SuperCPU Update Smut Bill on hold by Federal Court. Reason to celebrate? 2 V.I.C.E. UNIX C-128 Emulator Overview 5 List of Commodore repair facilities 6 More Internet Computer humor Throughout

A Few Words On Internet Free Speech

Yesterday a Philadelphia Federal court struck a blow to the Communications Decency Act, otherwise known as the smut Bill. All around the net people are cheering the ruling. Here's what a few other people had to say about net censorship.

Bill Gates: The Internet is the first medium that allows anyone with reasonably inexpensive equipment to publish to a wide audience.

Rose Stasuk: The Internet is the one place that I can selfpublish without the art market infrastructure's help.

Philippe Kahn: For

Centuries our people have been the victims of intolerance. The price of our freedom is the burden of having to accept the worst in public expression. For he who starts censorship will never know where and when to

Phillip Suh: I never met my other grandfather. He was a preacher in North Korea. The communists thought he was saying something indecent, bad for the public health. So one day they came and bound him and his oldest son and blindfolded them and stood

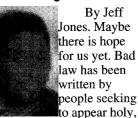

them by a ditch, so that when they shot my grandfather they wouldn't have to bother with carrying him into a grave.

Caleb John Clark: We're the hippies of the nineties, man! Technology is our drug, money our sex. Our "free love" is "global communication". Like the hippies, we've got the right message, but the public sees us as a group of totally irresponsible freaks ranting and raving. Source: http://www.eff.org/blueribbon.html

Highly recommended.

Decency Act, No. Decency, Yes!

and signed by a President who was afraid to say no to bad law because it might appear that he was saying yes to obscenity. Luckily the courts have limited power to block the birthing pains of re-election — bad law. Every two- four- and six-year cycle, our representatives, in spectacular testosterone fests, try to prove to us that they are:

first, holier than the opposition, second, for law & order, and third, protecting our children. You couldn't have a decent witch hunt without that chant.

Most bad law is written in the name of protecting children. Every election our representatives write tougher laws. America is so "decent" now that we have more people in jail than any other nation in the world. In Shreveport we recently opened a jail that was full before it opened. We have a clogged justice system precisely because we round up people by the millions and toss hundreds of thousands into jails and

throw away the key. Trouble is, we don't do that to murderers, robbers and rapists. Yet we have "wars" against "sick" (naughty) people who don't know any better. We'll write tougher laws for them than murderers. We'll limit our own rights to make it easier to get them. No parole. Give them pre-determined mandatory sentences. Meanwhile predators like murderer of Polly Claas enjoy the parole system which should be used for the non-violent offenders we're locking up like mad.

To make a point I just

(Continued on page 4)

Anatomy Continued...

(Continued from page 1) for a decade now. Rick is a true veteran, and, frankly, knows everything. He's my idea of a guru. Here's Rick's less-thanpleasurable adventure in telecommunications:

I had this silly idea that I wanted to start an Internet company in our small town, Millersburg Ohio. If you've been thinking of starting an Internet provider service, I'd say go for it, but be ready for delays and problems that aren't your fault. Over estimate the cost and the time for everything you do, and everything will work out.

I told myself in the beginning that I had run a bulletin board for more than five years, how hard could it be? What followed was a whirlwind course in wide area networking. I guessed that the most expensive cost would be the pipeline to the Internet, and I was right. Initially I thought that a 56K data line would be

sufficient. However, it turns out that 56k equipment is not upgradable. If our requirements grew, we'd be stuck with hardware that'd be useless. Next I looked into a T1 data line. Now we're cooking! more than 24 times as fast as a 56k line, but what a cost! It turns out that a T1 line consists of twenty-four 64K channels. The phone company will sell less than a full T1, usually in pairs of 64K

(Continued on page 3)

Q: Why do programmers always get Christmas and Halloween mixed

A. Because DEC 25 = OCT 31

Q: Did you hear about the Microsoft crystal ball?

A: Ask it something and it replies: "Answer unclear. Add 20 Meg of RAM and ask again later.

Q: How many MS engineers does it také to screw in a liant bulb?

A: None, they just define darkness as an industry standardl

Q. What do you get when you cross 200K of apples and lots of garbage?

A. A core dump

Have you heard about the new Cray? It's so fast, It executes an infinite loop in 6 seconds.

Have you heard about the new Cray lt's só fast, it requires TWO halt instructions to stop it!

Imagine that Crav computer decides to design a personal computer. It has a 150 MHz processor. 200 megabytes of RAM, 1500 megabytes of disk storage, a screen resolution of 1024x1024 pixels, relies entirely on voice recognition for input, fits in your shirt pocket, and costs What's the first question that the computer community asks?

"Is it PC compatible?"

Different Kinds Of Computer Viruses

Adam and Eve virus: Takes a couple of bytes out of your Apple.

Airline virus: You're in Dallas, but your data is in Singapore.

Anita Hill virus: Lies dormant for ten years.

Arnold Schwarzenegger virus: Terminates and stays resident, It'll be back.

AT&T virus: Every three minutes it tells you what great service you are getting.

The MCI virus: Every three minutes it reminds you that you're paying too much for the AT&T virus.

Congressional Virus: Overdraws your computer.

Congressional Virus. The computer locks up, screen spilts erratically with a message appearing on each half blaming the other side for the problem.

Dan Quayle virus: Simplye addse ane ee toe everye worde youe typee..

David Duke virus: Makes your screen go completely white.

Federal bureaucrat virus: Divides your hard disk into hundreds of little units, each of which do practically nothing, but all of which claim to be the most important part of the computer.

Freudian virus: Your computer becomes obsessed with its ownmotherboard.

SuperCPU Continued...

(Continued from page 1) already.

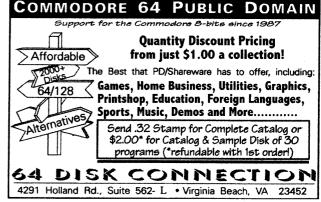

I also had a hard time converting a file from PetASCII to Screen code in TWS. Apparently I can't release the CRTL-A fast enough. It thinks I want to convert ASCII. If I had a half second to release the key before, now I have 1/40th, and I just can't do it. Fortunately I can switch back to 1 MHz mode at will. I can't stress how wonderful that is. On my Amiga, switching between 40 MHz and 7 MHz invokes an absolute mandatory crash. Turbomaster 4 MHZ accelerator for the C-64 is the same way. Instant crash.

While I worked on a game called Fastball (which appears on the next LOADSTAR), I noticed that this arcade game worked perfectly in both modes. This program uses interrupt based timing. It was probably written way before the SuperCPU was announced. When you follow rules, you avoid the consequences. My ball wasn't zinging 20 times too fast from left to right.

I would suggest using interrupt-driven sprite moving tools software based timing in BASIC or ML can lead to games that run too fast.

I also accept full credit for the concept of the SuperCPU. I remember suggesting it to CMD way back around 3 years ago when we first discussed them advertising in the LOADSTAR Letter. They said back then that it'd be too expensive and no one would buy it. The fact that LOADSTAR is still here, and that CMD is still here, means that you people out there are indeed buying.

Anatomy continued..

(Continued from page 2) channels. This is called a fractional T1. After pricing the fractional T1 (2 channels, or 128K) I decided that the whole idea had some possibilities. I set out to discover what was required to create an Internet site from scratch. It turns out that there are only four major components to a site.

1. A computer that acts as our server. 2. A Router to connect our customers to the

server. 3. A DSU/CSU to connect the router to the T1 (and ultimately the Internet). 4. Modems for customers to dial in on.

This took a while to figure out! Now it seems so simple, but back then it was all magic. Each item must be correct, or the whole thing falls apart. I decided on a Pentium 133 MHz computer with 4 GB of hard disk space and 32 Mb RAM. Pretty lame for a server I know, but an OK starter

machine!

I settled on UNIX software. Most of the net runs on UNIX, so why buck the system? Next came the router. This is easily the most complex device I've ever used! It determines the path for network traffic.

Next I had to decide how to connect the modems to the computer. I could install multiport serial cards in the server. Or, I could combine the modem

(Continued on page 4)

Decency continued...

broke my own rule and watched an R-rated movie, Within The Rock, on the Sci-Fi Channel. Since the Sci-Fi channel shows pasteurized, processed "TV-edited" movies with all the gore, sex and cursing censored, key parts of the movie were gone. Any important exposition that involved an expletive was wither riddled with stoppages of sound or just not there. I didn't get to see some key characters expire, and the the monster's death was just plain hacked out. Essentially they took a bad movie and made it

This is why I never watch a TV-edited silverscreen movie on a network while I will watch a movie that was made for TV. It's not the lack of vulgarity that I'm missing, it's the story! A censored movie is incomplete. A censored Internet will be just as incomplete, confusing and even troubling. Censorship does that to things.

The Smut Bill was another law that included mandatory penalties, taking away the power of judges to decide who should go to jail and for how long. For moments, we had another

mandatory sentence for being nonviolently naughty on your computer, but still few mandatory sentences for the mayhem we all fear!

So when the Senate debated and passed the smut bill. I said. "Here they go, protecting us from naughty couch potatoes who will never harm us."

I've seen the worst that freedom of speech has to offer. Smut is on the net in 16 million colors. The nude photos? Most are

illegally scanned from porn magazines, a practice which should be limited by law.

There's mail bombing and vulgar visceral reactions all over. What's a mail bomb? It's when you Email one unfortunate person a barrage of multi-megabyte files, which can ruin all mail for all people sharing that service.

This is the land of the free. I'm all for freedom, but before we surfers cry foul, maybe we should try acting more responsibly, like we do in the real public. The anonymous "nice" PTA-

We have outgrown our present facility We have outgrown our present facility and will be moving to a much larger location as of June 1, 1996. I would personally like to thank Commodore users from all over the country for contributing to the success and growth of Centsible Systems.

You can still call us at (318) 687-4613 or call our nationally networked Commodore BBS at (318) 687-0028. To show our appreciation to our loyal Commodore mail order customers. Centsible Systems will run

attending yuppies who are so vulgar online — the anonymous CEOs and celebrities who, despite copyright laws, upload scanned images to newsgroups, will one day come rue their frenzy of anarchy. A simple search for "Loadstar@softdisk.com" will pop up every post I've made on the net so I'm not going to upload nudie pics or post vulgarity! When Internet addresses stick like a social security number (and they will), there will be plenty of embarrassed people out there.

Gallup virus: Sixty percent of the PCs infected will lose 38 percent of their data 14 percent of the time (plus or minus a 3.5 percent margin of error).

Government economist virus: Nothing works; but all your diagnostic software says everything is fine.

New World Order virus: probably harmless, but it makes a lot of people reallymad just thinking about it.

Nike virus: Just Does

Ollie North virus: Turns your printer into a document shredder.

Pat Buchanan virus: Shifts all your output to the extreme right of your screen.

Paul Revere virus: This revolutionary virus does not horse around. It warns you of impending hard disk attack--once if by LAN, twice If by

PBS virus: Your PC stops every few minutes to ask for money.

Politically correct virus: Never calls Itself a "virus", but instead refers to itself as an "electronic microorganism"

Anatomy Conclusion

ports with the router (this is typically called an access server). An access server has the advantage of not slowing down your server. But on the down side access servers are pricey. We decided on the access server, and so far I think it was a good choice.

Next we needed modems. Boy they look at you weird at Sam's when you purchase 11 modems! Last but not least were the phone lines. We have 12 lines so far, but the phone

company hedged their bets by installing a 50-line cable to our location. The engineer at said it cost the phone company over \$16,000 to run the cable from town to our site! We should be all set for phone lines for a while....

Finally we're waiting for the feed to appear on our \$600+/month T1. Looks like any day now. Things are busy as you could imagine. Obtaining software to provide your customers merchant

account for credit cards, vendor's license just to name a few.

Right To Life virus: Won't allow you to delete a file regardless of how old

Ross Perot virus: Activates every component in your system, just before the whole thing quits.

Ted Kennedy virus: computer but denies it ever happened.

Ted Turner virus: Colorizes your monochrome monitor.

Texas virus: Makes sure that it's bigger than any other file.

UK Parliament virus: splits the screen into two with a message in each half blaming other side for the state of the system.

Warren Commission virus: Won't allow you to open your files for 75 years.

My sister opened a computer store in Hawaii. She sells C shells by the seashore

A computer program does what you tell It to do, not what you want it to do

A computer scientist is someone who fixes things that aren't broken.

After a certain number of decimal places, nobody gives a damn.

Congratulations! You are the one-millionth user to log into our system.

I haven't lost my mind; it's backed up on tape somewhere

Shift to the left! Shift to the right! Pop up, push down, byte, byte, bytel

The Good News Is There's a C-128 Emulator...

The bad news for some is that the emulator runs on a UNIX system, which most PC users don't use, myself included. I ran across a post in comp.emulators.cbm which led me to this web page:

http://stekt.oulu.fi:/~jopi/ and this is what I found. It never ceases to amaze me how sharp the people on the net can be — and these people are on our side. They want to immortalize the Commodore 8-bit line. Whether or not The V.I.C.E. works well, I know I couldn't begin to write a version that works terribly. Here's what they have to say about Vice:

The Versatile Commodore 8-bit Emulator: Highly portable Commodore emulator for U*ix machines with X11 graphics support, written completely in C language.

The one and only versatile CBM emulator! Our warm thanks go to everybody

who has helped us in developing the VICE during these past few

VICE is the one and only versatile CBM 8-bit emulator. It provides you with complete emulation of the 6502/6510/7501/8500/8502 CPU as well as Zilog Z80, both with undocumented opcodes and single-step capability.

The 6510 Simulator provided with graphical user interface can even be used not dependent on any specific machine. Easy to use built-in Machine Language Monitor allows one to freeze and save, study, re-run, and debug ML programs on any of the machines emulated. Both extensive documentation and on-line help are provided to support anyone learning or using the 6510 Machine Language.

The documentation is also available separately, and it's worth getting no matter whether you actually use the VICE or some other emulators.

VICE is targeted for C64 enthusiasts and programmers. It's also suitable for the average user of earlier released C64 emulators like C64S, PC64, or X64. Tools are provided to convert files from emulators' unsupported file formats to the supported ones

Unlimited number of emulator processes can be run independent of each other on any UNIX or Linux system with

XLib and color palette support. The VICE Release 0.11 features...

The VICE Release 0.11 features... much higher compatibility (brand new interrupt code by Andre), 2.3 times faster CPU emulation (not for x128), more VIC-II effects supported, important bug fixes (including the keyboard), better VIC-II timing (bad lines, sprite cycles), faster sprite-sprite collisions, direct 764/D04 image handling... Available soon on your FTP provider. (: More to come... on VICE 0.12 SID support Pop-up menus Development Information
The VICE is a versatile Commodore emulator for X-Window System on UNIX. It has been successfully tested on Linux with XFree 2.1, Sunos 4.1.2 and 4.1.3 with X1R5 and Openwindows 3.0, SunOS 5.2, 5.3 and 5.4 with Openwindows 3.2, Ultrix 4.3, HP-UX 8.0, ConvexOS with X1IR5, SCO ODT 3.0, IRIX 5.1.1.2 and ConvexOS with X11R5, SCO ODT 3.0, IRIX 5.1.1.2 and even on AIX 2.1 with X11R3. It also compiles on HP-UX and Amiga Linux without major problems

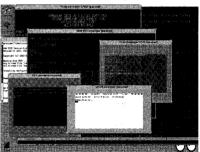

The VICE distribution files are available on the traditional FTP

(ftp.funet.fi, frodo.hiof.no, etc.). See below.

All new ideas, information, documents, bug reports, paths and even new developers are welcome any time. Current sources are available on request.

You forgot to do your backup 16 days ago. Tornorraw you'll need that version.

My sister gave up on Computer Daffing after she was stood up by two mainframes, a mint, and a laptop.

The Queue Principle: The langer you wait in line, the greater the likelihood that you are standing in the wrong line.

The program is absolutely right: therefore the computer must be wrong.

10.0 times 0.1 is hardly ever 1.0.

All computers run at the same speed...with the power off.

Any given program will expand to fill available memory:

Any nitwit can understand computers. Many do. - Ted Nelson

Any program that runs right is obsolete.

Any sufficiently advanced bug is indistinguishable from a feature. - Kulawiec

Artificial Intelligence: Making computers behave like they do in the movies.

Email your jokes to Jeff@Loadstar.com jokes remain your property.

MONTHE

LOADSTAR is a monthly "magazine on disk" for the Commodore 64/128. Subscribers receive two 1541 disks (or one 1581 disk) in their mailbox two 1541 alsks (of one 1551 alsk) if their intalibod, every month packed with news, articles and programs. These non-PD, high quality programs are written by the best homebased programmers in the field and edited by the crack LOADSTAR team of Fender Tucker and Jeff Jones. Subscription prices are at an all-time low of \$69.95 for a 12-month subscription, or low of \$69.95 for a 12-month subscription, of \$19.95 for a three-month subscription. You may also elect to subscribe "by the month," where we charge your credit card \$7.95 for each issue after it's shipped. We also offer the long line of standalone products below.

Games Disk! The Compleat Jon: 11 Games! The whole gamut of gaming is covered here: artificial intelligence, role-playing, mazes, fantasy, science fiction, education and even nonviolence (which was a radical concept in its time). These

concept in its time). Ihese eleven games are among the best ever published on LOADSTAR. Listed on the menu in chronological order, so you can see how Jon's style changed as the years rolled by. 1581 disk 1021D3 \$20. 1541 disk #0038D5 \$20

disk! The Compleat Puzzle Crossword: Every crossword puzzle published in

Crossword: Every crossword puzzle published in Puzzle Page in one huge collection! Two hundred twenty puzzles! It uses Barbara Schulak's CRUCIVERBALIST program to present the puzzles and allows you to "mark" a puzzle when it's solved so that you know which you've solved and which you've solved and which you haven't yet. Each 1541 disk contains 110 puzzles. 1581 disk #0020D3 \$20. Disk one (1541) #0036D5 \$10.Disk two (1541) #0037D5 \$10

C128 Productivity! The Compleat Lee

O: Six of Lee O. Clinton's best serious programs for the C128 80 column mode. Finance, auto expense, a kitchen helper, genealogy, resume writing, mutual funds! One 1541 disk #0032D5. One 1581 disk #0017D3

Word Search! Super Star Search 1: 200 original word search puzzles by Steven Thomas and Art Dudley, presented by John Serafino's modern point and click program. One 1541 disk #0011D5 One 1581 disk #0008D3 \$20.00

Story disk! The Compleat ProseQuest '95: NEW! A 1541 disk with all of the entries in the 1995 short story writing contest on it, including the three grand winners. Jeff Jones adds two spine-tingling novellas. One 1541 disk #0035D5 One 1581 disk #0019D3 \$5.00

Soft Wear! LOADSTAR T-shirts: Limited edition Fruit of The Loom T-shirts. LOADSTAR's nemesis. Knees Calhoon, stands up to regular washing and drying. Where else can you find Commodore apparel? 50% Cotton//Polyester. \$15.00 each with free shipping! Small #960025, Medium #960125, Large #960225, X-Large #960325, XXL #960425

The Compleat Programmer: A best seller! More than two megabytes of knowledge crammed and stuffed onto eight 5.25-inch disks or two 1581 disks! In srutted onto eight 5.25-inch disks or two 1581 disks! In addition, tools, extensions, languages, assemblers, tutorials and urtilities! 5.25 set #0005D5. 3.5-inch disk #0005D3. \$20.00 For \$5 more, get C= Hacking MAG#0006D3 (on 3.5-inch disks) to complete your programming set.

PS Graphics! Compleat PS Vol. 1 Over 1300 artistic and never before published PRINT SHOP images. Scan through the many PRINT SHOP images images. Scan through the many PRINI SHOP images sequentially, by name, or by group number. Press a key and save the graphic you want in 2-block, 3-block and even PRINITMASTER graphic files! All that plus a printed guide! Each volume is \$20.00. Vol. 1: C64/128 3.5-inch disk item #000103. 5.2.5-inch disks item #000945. Vol. 2 (graphics from past 15 issues): C64/128 3.5-inch disk item #0010d5.

Diskfulla Card Games! The Compleat Maurice: A compilation of 26 sollitaire card games written by Maurice Jones, the acknowledged master of card game simulations for the C64/128. There's even a brand new, never before published aame called card game simulations for the Court 225. There's event of the published game called Boomerang. Two 5.25 inch disks #0007D5 or one 3.5 inch disk #0007D3. \$20.00 postage paid!

Oodles Of Stunning Art! Tutorials! The Compleat Walt: During LOADSTAR's first ten years

we have published 24 of Walt Harned's slideshows and events. multimedia multimedia events. Now we've gathered them into one huge collection: seven 5.25 inch disks or three 3.5 inch disks! There are more than 250 including pictures.

some that have never been published. It may be the greatest one-man collection of art on any computer platform. 5.2.5-inch disks order #070425 3.5-inch disks order #070423. \$20.00 postage paid!

GEOS CLIPART

LOADSTAR presents a huge GEOS collection of clip art and fonts. All of the GEOS art that's ever appeared on LOADSTAR, as well as some great files from-GEOS fanatic Dick Estel, are available on twenty 5.25 inch disks or eight 3.5 inch disks. Most of this has never been seen before! Use these graphics in your GeoParit for GOW with FGM utilities. Spiff up your GeoFAX documents with the appropriate graphic every time! Prices are \$20 for any two 3.5 inch disks, or any five 5.25 inch disks. You can purchase the whole collection for \$75 for either version.

5.2.5-INCH DISKS

RAILS: Railroad art from Europe/USA Disk 01 #0012D5

Disk 02 VEHICLES/TAROT: Artwork of old and new autos; excellent GeoPaint drawings of the Tarot card set #0013D5

Disk 03 CLIP ART: Includes converted MacPaint files that have never before been available in Commodore format #0014D5

DISK 04 OTTAWA/PRIME CLIPS: Artwork of the main landmarks of Ottawa. In addition, high quality

public domain clip art #0015D5

Disk 05 FONTS: More than 30 fonts from past issues of LOADSTAR, plus articles (in GeoWrite format) on creating fonts, Also two ready-made headers for use with your own documents, one a picture of a maltruck; the other reading "FROM THE DESK OF" #0016D5

Disk 06, Disk 07, and Disk 08 GeoPaint and Photo Album files with the great clip artwork featured on GeoCumuageon, Animals, Valentine art and many more #001705, #001805, #001905

Disk 09 GOODYKOONTZ FILES: Jasper Goodykoontz, born in Indiana in 1855, produced Goodykoontz's Perpetual Calendar and General Reference Manual (A Book for the Millions). This disk includes scans from the book of a wide array osubjects Gestures and Attitudes, Pouttry, Craniology, and more. #0020D5

Disk 10 OLD WEST: Scanned Artwork from Dick Estel's FRD Software mostly woodcut style art of the old west, gold rush days and pioneer scenes. #0021D5

Disk 11 J. Needy Art/Animals: Jennifer Needy works with a wide variety of subject matter and materials. Disk contains some of her favorites, scanned to GeoPaint format. Side two is a collection of scanned artwork of animals from FRD Software #0022D5

Disk 12 HOLIDAY: Artwork for New Years, Valentine's, St. Patrick's Day, Halloween, Thanksgiving and Christmas #0023D5

Disk 13 PEOPLE/FACES: Scenes of people and faces from FRD Software #0024D5

Disk 14 FRD CLASSICS: Dick's choice of the best of the FRD collection #0025D5

Disk 15 DINOS/CLASSICS: Dinosaurs and other prehistoric beasts, as well as more first choice artwork from FRD. #0026D5

Disk 16 SPORTS/MISC: Dozens of sports related clips #0027D5

Disk 17 OFFICE AND SCHOOL: Clips to be used at work and around the house #0028D5

Disk 18 MUSIC & MORE SCHOOL CLIPS #0029D5

Disk 19 SEASONAL AND HOLIDAYS: A clip for any occasion #0030D5

Disk 20 SEASONAL AND HOLIDAYS: A clip for any occasion #0031D5

3.5 INCH DISKS

The 3.5" disks are roughly equivalent to two and a half 5.25" disks.

Disk 1: Equals disks 1, 2, 4B #0009D3

Disk 2: Equals disks 3, 6, 7A #0010D3

Disk 3: Fauals disks 5, 8, 7B #0011D3

Disk 4: Equals 9, 10, 11A #0012D3

Disk 5: Fauals 12, 13, 11B #0013D3

Disk 6: Equivalent of Disks 14, 15 and some bonus files

not on 5.25" disks #0014D3

Disk 7: Sports, Office and school, Music #015D3

Disk 8: Music, Holiday and Seasonal #016D3

For your convenience, GeoViewer is included. GEOS 2.0 suggested.

Increase Speed Up to 1500% while retaining 100% compatibility

- Speeds up Loading, Saving, Verifying, Formatting and Reading/ Writing of Program, Sequential, User and Relative files unlike cartridges which only speed up Loading and Saving of PRG files
- · Built-in DOS Wedge plus 17 additional features including file copier, text dump, printer toggle, and redefinable function keys make using your computer easier and more convenient
- ROM upgrade installs easily into most computers and disk drives. Supports C-64, 64C, SX-64, C-128, 128-D, 1541, 1541C, 1541-II,1571, 1581 and more.

1.6 MB 3.5" Floppy Drives

The FD-2000 disk drives utilize today's latest 3.5 inch disk drive technology. FD-2000's support 800K (1581 style) and 1.6 MB (High Density) formats. Fast and reliable, they

support 1541, 1571 and 1581 style partitions, Native Mode partitioning and can actually read and write 1581 disks. FD's feature built-in JiffyDOS, SWAP button and optional Real Time Clock. High capacity, speed and compatibility make the FD right for every application, including GEOS.

Power-Backed Expandable REU

The fastest possible form of storage, RAMLink provides instant access to files and retains data while your computer is turned off. Easy to use and expandable up

to 16 MB, RAMLink utilizes the same powerful operating system found in CMD Hard Drives. Unlike Commodore REU's which are compatible with less than 1% of commercial software, RAMLink supports more than 80% of the commercial titles. RAMLink also offers built-in JiffyDOS Kernal, SWAP feature, reset button, enable/ disable switch, pass-thru port and RAM port for REU/GEORAM use. RAMLink offers maximum speed, expandability and compatibility with all types of software and hardware including GEOS.

HD Series.

SCSI Hard Drive for the C-64/128

HD Series Hard Drives are available in capacities up to 1 GB, are fully partitionable, and can emulate 1541, 1571, & 1581 disks while Native partitions utilize MS-DOS-style

subdirectories. HD's connect easily to the serial bus or parallel via RAMLink. Includes built-in JiffyDOS, SWAP feature and RTC. HD's offer superior compatibility with most commercial software including BBS, Productivity and GEOS. And with new pricing, HD Series drives offer the lowest cost per megabyte of any C64/128 storage device.
